INTRODUCING

The FireCaddy™ FlameOut® Fire Suppression System

*Effectively extinguishes many types of fires
and is environmentally friendly.*

Provide an additional safety measure for your passengers and protect your coach investment.

Be prepared. Should your coach suffer a fire while out on the road, the FireCaddy™ FlameOut® System offers superior fire-fighting capabilities on the spot, allowing a driver or individual to effectively extinguish many types of threatening fires, before emergency help arrives.

Here's how it works.

Unlike traditional dry chemical fire extinguishers, where re-ignition can occur, the FireCaddy™ features its patented FlameOut®, a fire-suppressant foam that acts on all three sides of the fire triangle to:

- Extinguish the fire
- Cool the burning matter to below re-ignition temperature
- Create a foam barrier between the matter and oxygen.

***While firefighting should be left to the professionals,
the system is designed to help minimize damage before the firefighters arrive.***

Example of a deep seated fire

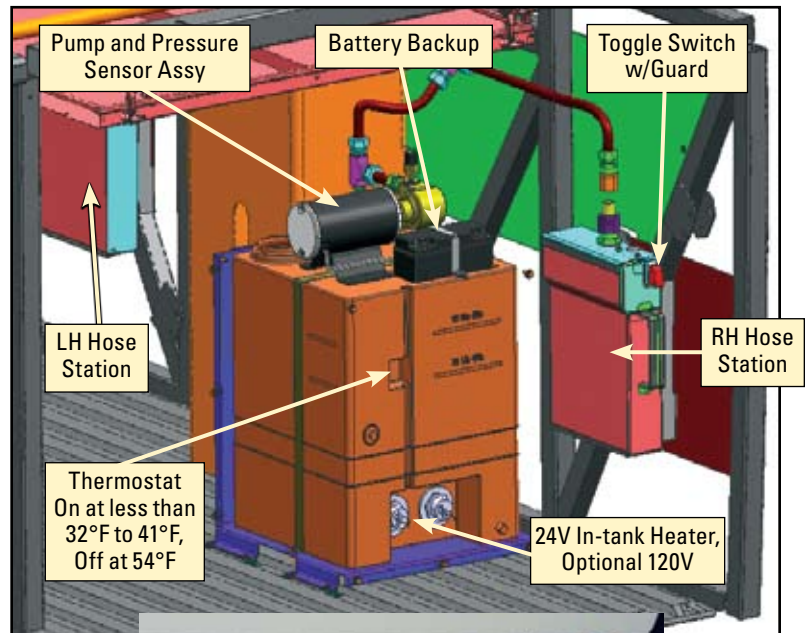

Approximately 10 seconds after the system is activated suppressing the fire

Approximately 44 seconds, deep seated fire is suppressed

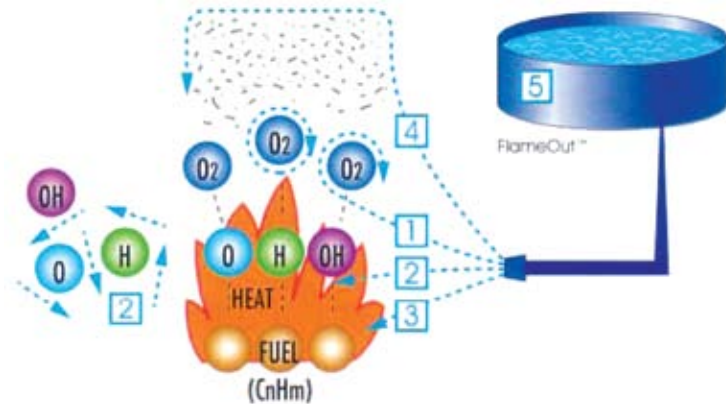

FireCaddy™ Features and Benefits

- The FireCaddy™ FlameOut® Fire Suppression system has more than two minutes of Class A and B fire-fighting capability at a safe distance from the fire hazard and is seven times more effective than water alone. Its DC pump delivers a powerful flow rate of 6.34 gallons of FlameOut fire suppressant foam per minute.
- The manually operated system includes two hand-line hoses of approximately 35 feet; a 14 usable gallon tank and a rechargeable battery power source to help ensure the system will always be ready for a fire emergency.* The system is installed with a protective cover over the tank and motor.
- FlameOut® foam is nontoxic, non-corrosive and 100% biodegradable.
- Installs easily in the baggage bay for easy access.

Exclusive to MCI, the FireCaddy™ Flame Out® Fire Suppression System can be installed on your MCI® coach at any of the MCI Service Centers in the U.S. and Canada, or ordered as an option on a new MCI coach.

**Not for use on electrical fires. MCI recommends that a traditional Class ABC fire extinguisher also be carried on your coach.*

FlameOut in Action

- Encapsulates the oxygen to effectively “eat” the fire
- Breaks the hydrocarbon string to render the matter inert
- “Wets” the water increasing its cooling and penetration properties
- Acts as a “scrubber” knocking smoke and soot to the ground
- Makes water seven times more effective

Contact your local MCI Service Center to schedule your installation, or contact your MCI new coach sales representative to add this option to your new MCI coach.
