SMARTTIRE®

Active tire pressure system monitoring display available from MCI Service Parts

Improve your safety program and save at the fuel pump! SmartTire provides real-time tire pressure and internal tire temperature information from the convenience of the driver's seat. Preprogrammed, yet fully customizable, the SmartTire system alerts drivers when a tire becomes 15 percent under-inflated and provides a critical warning when a tire is 25 percent under-inflated. Plus, the system has a high-temperature alert intended to warn drivers before a blow-out.

According to its manufacturer, SmartTire:

- Extends tire life
- Improves fuel economy
- Reduces down time due to tire failure
- Improves vehicle handling in wet weather
- Automates tire pressure inspections
- Provides a warning for an excessively hot tire.

Yellow SmartTire Sensor.

PART #07-08-3590. You will need nine sensors for eight wheels and spare.

Ready-to-install SmartTire pressure monitoring system. PART #T07-2928.

Sensors not included. *New and improved sensors now sold separately!*

SmartTire Rolls Out Faster Sensors

New "Always On" Sensors for the SmartTire System.

Unlike the System's original standard orange sensor, which transmits data in 60-minute intervals if a coach is stationary or traveling under speeds of 14 mph for 15 minutes, the new "Always On" yellow sensor senses tire pressure every 12 seconds and transmits data every three to five minutes. According to its manufacturer, the new, faster sensor:

- Eliminates troublesome error messages
- Senses tire pressure even when the coach is idle, standing or parked.

Installation is available through any of the eight MCI Service Center locations in the U.S. and Canada.
